

D-Trade2 Rollout Set for Second Quarter of Fiscal Year 2008

The D-Trade2 rollout is scheduled for the second quarter of fiscal year 2008 (which ends end of February). Although it is largely an improvement to the internal part of the software application, both internal and external components have been changed, so both have to be introduced simultaneously. We will provide a specific rollout date when appropriate.

The delay in the rollout will ensure that Industry customers *not* using the PureEdge forms package have the ability to continue to use third-party interface solutions. During Fiscal Year 2007, PureEdge forms users accounted for 40,655 license submissions, and non-PureEdge forms users accounted for 2,067.

Although the D-Trade2 rollout will incorporate the new amendment forms (DSP-6, -62, -74), "batch" users must continue to use the DSP-119, submitted through the legacy system, for an additional 12 weeks after the rollout date. Notice will be given when the new amendment forms will be enabled in the batch function.
